

## Answers

### 1. Which input type does not exist?

input type=dropdown

input type=year

*Remark: Use the select-tag when you want a dropdown. When you want an editable dropdown, use <input list="<datalist-id>"> combined with <datalist id="<datalist-id>">.*

### 2. Draw a line between the CSS-style and the value.

background: blue;

background: red;

font-size: 20px;

font-style: italic;

font-variant: small-caps;

font-weight: lighter;

opacity: 0.5;

text-shadow: 20px 10px;

text-transform: uppercase;

*Remark: font-color doesn't exists!*

### 3. How to check the Internet connectivity status of a user's browser?

D. navigator.onLine

### 4. Losing focus

onblur

### 5. element.addEventListener() & element.attachEvent()

*element.addEventListener()* is the standard property.

*element.attachEvent()* is not a standard, but was used in IE version 6 to 10. Might be in exam!

### 6. Question

Only "The text of the **Impact On Markets** header is italicized." is true.

### 7. CSS: text-decoration

It allows you to draw lines above, under *and/or* through text.

## 8. .call() vs .bind()

### In common

They both allow you to provide a value for *this* to be used within the function.

### Different

.call() will execute the function.

.bind() returns a new function that has *this* bounded to the provided value. Function isn't executed.
