# Demonstration instructions

Demo_SelectionDomManipulation

1. Open HellojQuery in an editor.

2. Open index.html in the editor. Note the HTML <table> with <tr> elements containing the names and salaries for some people.

3. Now locate the <script> tag lower down in the <body> section. Note the first statement, which applies a style for even-numbered rows in the table. (Ignore the button-click-handler code for now, because this is discussed in the next demo).

4. Run the application and verify that it appears as follows:

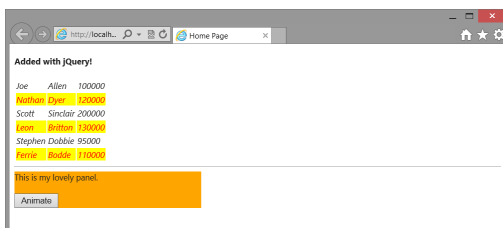

5. Go back to the editor, and in index.html, locate the <script> tag in the <body> section again.

6. After the code that sets the table style, type:

```
$("td").css('font-style', 'italic');
```

7. Run the application again. Verify that the table cells now appear in italics.

8. Go back to the editor, and in index.html, locate the <script> tag in the <body> section again.

9. Immediately after the code you typed in just now, add the following code:

```
$("table").before("<h4>Added with jQuery!</h4>");
```

10. Run the application again. Verify that the page now appears as follows:

11. That concludes the demonstration, so close the browser and close the editor.
